

### TRIUMPH HYDRO-CLIPPER

2500 - 3500 - 5500 - 6000 - 7500 - 8500

#### **ARCHIVE BOOK**

#### By Serial Number / Production

Jan 1962 to Feb. 2001 (End of Production)

#### COMPLETE PARTS LISTING

Archive Book Part No. **02979557** 

#### **ALAMO INDUSTRIAL**

1502 E. Walnut Seguin, Texas 78155 830-372-3551 2004 Edition

## **NOTES**

Note: Front Cover is Page 1 & 2 Parts Section -3

## INDEX - Hydro Clipper 5 ft - 6 ft - 7ft

ITEM PA	AGE NO.
Hydro Clipper / Sickle Bar Cutter	
Intallation Instructions	140 thru 142
Model Parts Introduction	7
Model Information	130 thru 139
Operation Instructions	143 thru 144
Serial Number Information	159 thru 172
Service Instructions	145 thru 158
2500 MODEL	
Lift & Break-A-Way Asy	8-9
Lift & Break-A-Way Parts	10-11
Pitman Arm Asy	12-13
Cutter Bar Asy	14 thru 25
Knife Asy	26-27
Hydraulic Cylinder	92-93-94-95-96-97
Hydraulic Motor	28-29-30-31
Hydraulic Valve Open Center 3 Spool (Bar Lift, Curb Lit & Motor Cntrl)	98 thru 105
Open Center 2 Spool (Bar Lift & Curb Lift)	106-107
Open Center 1 Spool (Motor Control)	112-113
Closed Center 2 spool (Bar Lift & Curb Lift)	108-109
Closed Center 1 Spool (Motor Control)	110-111
Hydraulic Governor	114-115
Hydraulic Pumps	116 thru 123
Hydraulic Tanks	124-125
AG Skid Shoe Option	126-127
Decals	128-129
3500 MODEL	
Lift & Break-A-Way Asy	32-33
Lift & Break-A-Way Parts	34-35
Pitman Arm Asy	36-37
Cutter Bar Asy	38 thru 49
Knife Asy	50-51
Hydraulic Cylinder	92-93-94-95-96-97
Hydraulic Motor	52-53-54-55
Hydraulic Valve Open Center 3 Spool (Bar Lift, Curb Lit & Motor Cntrl)	98 thru 105
Open Center 2 Spool (Bar Lift & Curb Lift)	106-107
Open Center 1 Spool (Motor Control)	112-113
Closed Center 2 spool (Bar Lift & Curb Lift)	108-109

## **NOTES**

#### HYDRO CLIPPER 5, 6 & 7 ft SICKLE BAR ARCHIVE BOOK INTRODUCTION

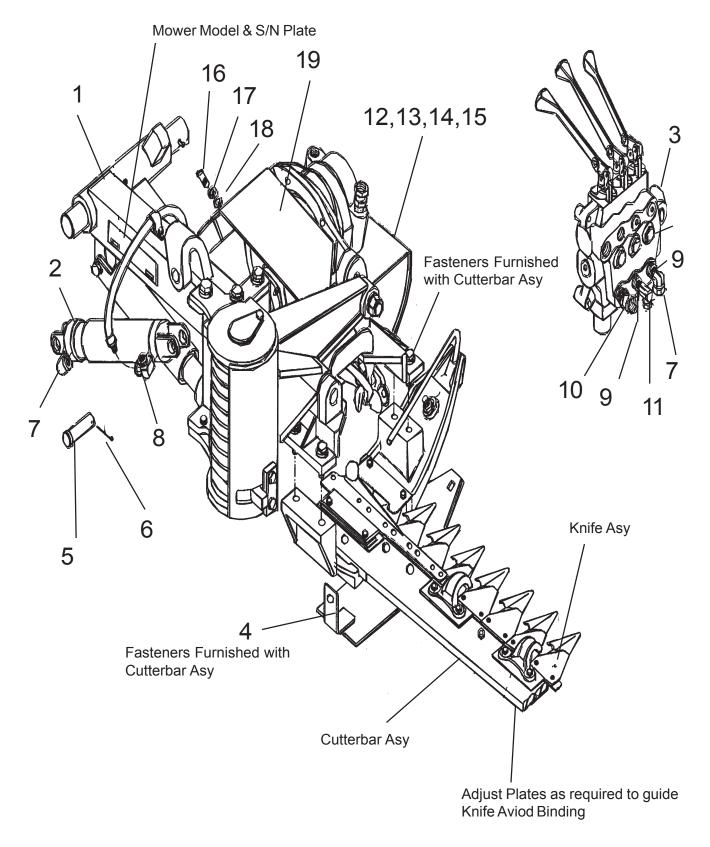

The Hydro-Clipper (2600, 3500, 7500 & 8500) Archive Book is a complete listing of Parts from the first Unit to the Present. The Production Dates, Serial Numbers are available when possible, Special Notes and Descriptions are furnished to help find Replacement Parts. Dimension (if listed) are for Identification of Parts and MAY NOT be to Manufacturing Specification, Your measurements may vary some from dimensions listed. Some Parts may be changed and be different than parts listed. Some Modification may be required when replacing older parts. Match S/N's listed in the rear of this Book with the Ship Dates listed at the top of each Parts Page. This is because of the different range of Model sizes using these S/N's. Some S/N Info is not available, Check with Alamo Customer Service Dept for S/N questions. Production of this Model Ended Feb. 2001.

For ordering parts the following instructions are offered to help eliminate delay

- 1. The purchase order must include the Name, Address (Ship to Street Address) of the Person / Organization ordering the parts. Who / How Parts should be Billed. Name and Phone Number of a Contact Person at your end.
- 2. The Purchase Order must list clearly the correct Part Number of Part. Quantity of each Part wanted, Complete and correct Description of each Part. All Parts will be shipped as requested depending on availability and/or reasonability of request carrier / method.
- 3. Alamo Industrial reserves the right to substitute parts where applicable and change prices Without prior notice. Alamo Industrial also reserves the right to Ship Parts the most Reasonable way as determined by Alamo Industrial.
- 4. Some Parts are unlisted items, which are special production items not normally stocked or built for a limited / special use, These parts may be subject to special handling or cannot be priced till ordered. Always Request a quotation for such Parts before sending a purchase order.

#### MOTORS HAD 1" or 3/4" Gears

Item	Part No New #	Part No. Old #	Qty.	Description
	0188600	1886	1	Hyd Motor w/ 1" Gears (Use # 02977145 Motor Kit)
	0118600M	1186	1	Hyd Motor w/ 3/4" Gears (Use # 02978088 Motor Kit)
1	0115500	1155	1	Shaft End Cover, (w/ Items 3,4,5,6,7,8,9,14, 21,22 & 2 of item 2 Only)
2	0159900	1599	4	Roller Bearing
3	0029000	290	1	O-Ring Seal
4	0588700	287	1	Bearing
5	0028800	288	1	Retainer Ring
6	0028900	289	1	Bearing Shield
7	0038000	380	2	Check Ball, (Not Shown)
8	0038100	381	2	Check Ball Retainer, (Not Shown) (Use # 0038000)
9	0038200	382	2	Check Valve Seat (Use # 0038000)
10	0448800	4488	1	Center Housing (use on Motor w/ 1" Gears)
	0115100	1151	1	Center Housing (use on Motor w/ 3/4" Gears)
11	0163100	1631	2	Gasket
12	0029200	292	2	Thrust Plate
13	0029300	293	1	Gear Key
14	0063500	635	1	Pipe Plug
15	0448300	4483	1	Port End Covers
16	0029700	297	10	*Pocket Seals (approx 1/2" Long)
17	0147200	1472	1	Gear Set 1" Gears, Matched Pair, 2 Gears
	0115300	1153	1	Gear Set 3/4" Gears, Matched Pair, 2 Gears
18	00008200	1865	10	Bolt (use on Motor w/ 1" Gears)
	0126800	1268	10	Bolt (use on Motor w/ 3/4" Gears)
19	0115200	1152	1	Shaft
20	0126900	1269	1	Shaft Key
21	0241100	2411	1	Bearing Retainer
22	0231800	2318	1	Seal, Double Lipped

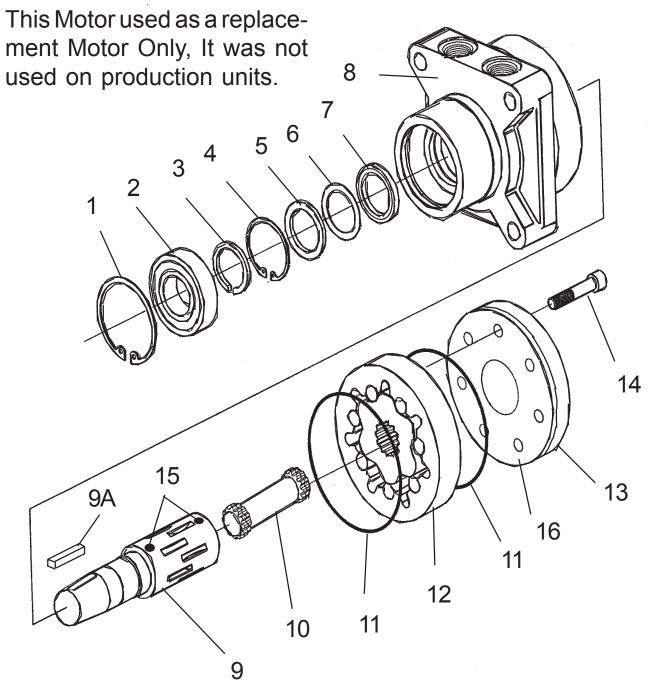

NOTE: There are 2 different Motors, One had 1" Gears (Used on D3500 Model) & the other has 3/4" Gears (Used on the S3500 Model), Check which Motor before ordering High Lighted Parts above. The rest of the parts are common Parts & will interchange between the two pumps, The "D3500 or S3500 is a Designation as to what Tractor they were mounted on.

This Valve used from Sep. 1982 till Dec. 1987, This Valve replaced Valve # 4140 and will function the same as the # 4140 Valve. When this Valve is used to replace # 4140 Valve It will be required to drill 1 mounting hole ("A" Mount Hole) in mounting Plate to mount it. Also it may be required to add Spacers (washers) between Valve and mounting plate to get clearance between them. Plug Port "B" if replaceing # 4140 Valve or pipe Governor into port "B" and leave port "C" Plugged as received.

Jan. 1988 to Feb. 2001 Valve - 3 Spool Open Center

17	NLF	4263	1	Cartridge Kit (items 5, 6, 7 & 8)

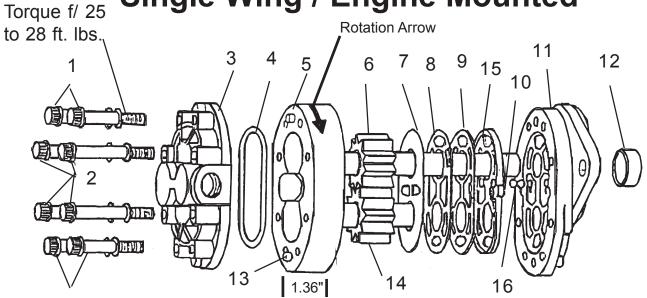

The above Pump & Repair Parts are Obsolete & NLF (No Longer Furnished) as replacement parts, It will be required to supply parts locally or replace with later style Pump. there is no direct replacement part number and modifications may be required. Alamo will not be responsible for any modifications.

Dec. 1973 to Feb. 2001

# Pump Asy Cessna

S/N SB-All to S/N SB-End Production

Single Wing / Engine Mounted

To ID this Pump, Note Bolts( Item 1 & 2) are installed from Back Plate (item 3) side, if they install f/ Front Flange Plate side (item 11) see Parker Hannifin Pump on Previous Page. Also Note Arrow on Body (item 5) indicating Pump Rotation.

ltem	Part No New #	Part No. Old #	Qty.	Description
	0169900	1699		Hyd. Pump, Cessna Pump
1	0242000	2420	4	Tie Bolt, 2-3/4" Long (Top 2 & Bottom 2)
2	0242200	2422	4	Tie Bolt, 3" Long (4 Middle Bolts)
3	0443100	4431	1	Back Plate Asy.
4	0443200	4432	1	* O-Ring
5	0443300	4433	1	Gear Housing, w/ 1.36" wide Housing
6	0242500	2425	1	Drive Gear Asy
7	0242600	2426	1	* Diaphragm
8	0242700	2427	1	* Back-Up Gasket
9	0242800	2428	1	* Gasket
10	0243000	2430	2	* Spring
11	0243200	2432	1	Front Plate asy
12	0243300	2433	1	* Shaft Seal
13	0443400	4434	1	Dowel Pin
14	0243400	2434	1	Idler Gear Asy
15	0242900	2429	1	* Diaphragm Seal
16	0243100	2431	2	* Steel Ball
17	0244400	2444	1	Key, Square (Not Shown
18	0408900	4089	1	Seal Kit, (* Items 4, 7, 8, 9, 10, 12, 15 & 16)

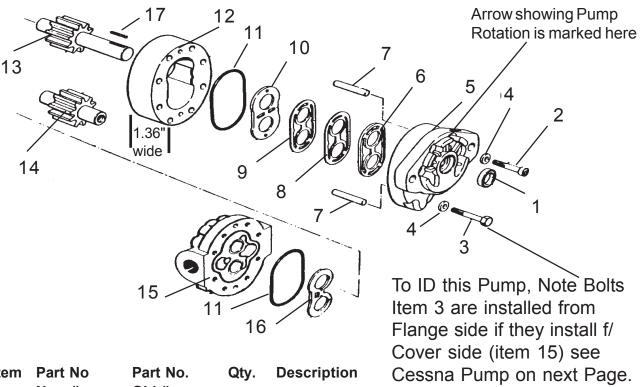

NOTE: There are 2 different pumps used with the same Asy No. 0169900, See ID Notes this page and next to determine which you have. The Cessna Pump was most common, The Parker Hannifin Pump was used small % of the time because of supply problems, Always check which pump before ordering parts

Dec. 1973 to Apr. 1998

NOTE: There are 2 different pumps used with the same Asy No. 0169900, See ID Notes this page and next to determine which you have. The Cessna Pump was most common, The Parker Hannifin Pump was used small % of the time because of supply problems, Always check which pump before ordering parts

Triumph Sickle Bar (Archive Book) 10/02

May 1998 to Feb. 2001

# Pump Asy Single Wing Engine Mounted

S/N SB-N/A to S/N SB-End Production

Item	Part No	Qty.	Description
1.	02973292		Hyd. Pump Asy. "A", (1.02" Gear Housing)
2.	02973291		Hyd. Pump Asy. "B", (0.89" Gear Housing)
3.	02974134	1	Seal Repair Kit (Will Fit Both Pumps)

#### NOTE:

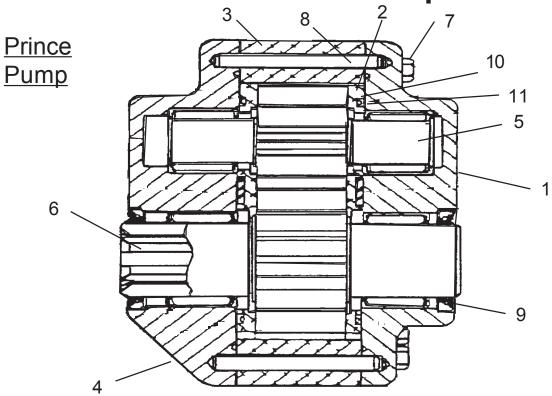

- 1. Pump Used on Tractor to Match Tractor RPM. (Engine RPM is what speed Engine is being run to produce 540 PTO Speed).
- 2. Pump # 02973292 is rated for Tractors with 1800 to 2100 RPM this Pump has a 1.02 CID and Pump # 02973291 is rated for Tractors with 2101 to 2500 RPM this Pump has a 0.84 CID, The Pump # 0169900 (old Pump) used prior to this was run at 1200 to 2500 RPM and used a Governor, the Gear Housing on Old Pump # 0169900 measured 1.36" across
- 4. Always measure width of Gear Housing to determine which Pump.
- 5. See Pump Istruction Sheet # 02973295 on these Pump.
- 6. The Above Pumps DO NOT use a Governor as the earlier pumps did. Check for Governor to determine if you have the older pump.
- 7. There are no replacement Parts for this Pump at this time Only Complete Pump Asy or Seal Kit, Contact Alamo Parts Dept.

# Agricultural Outer Shoe Optional Eqpt.

S/N SB-All to S/N SB-End Production

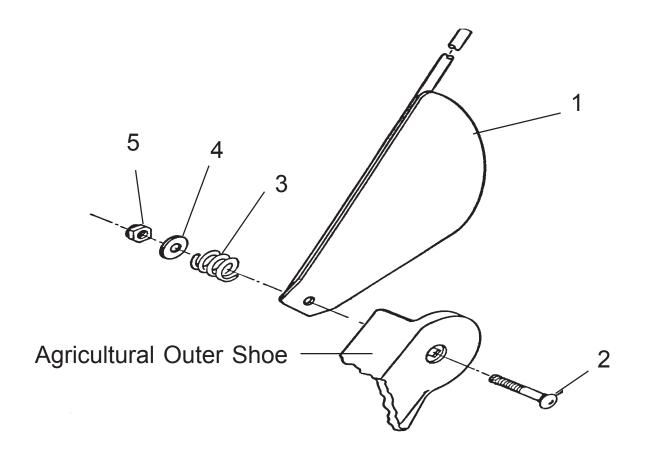

Item	Part No	Part No.	Qty.	Description
	New #	Old #		
	0449800	4498		Agricultural Outer Shoe kit (RH Model)
1	0468100	4681	1	Outer Shoe Asy, RH Model
	0468200	4682	1	Outer Shoe Asy, LH Model
2	0046800	468	1	Outer Shoe Sole Asy, RH Model
	0482400	4824	1	Outer Shoe Sole Asy, LH Model
3	0467900	4679	1	Grass Wiper Plate
4	0081200	812	1	Carriage Bolt, 1-1/2" Long
5	0493500	4935	2	Carriage Bolt, 1" Long
6	0046400	464	2	Bolt, Counter Sunk Head
7	0046000	460	3	Lockwasher
8	0045900	459	2	Lockwasher
9	0163800	1638	3	Nut
10	0116200	1162	1	* Ledger Plate
11	0116300	1163	1	* Screw, Flat Head
12	0076100	761	2	Nut, Hex

<sup>\*</sup> Items #10 & #11 are included with Item #1

# Swathboard Kit Optional Eqpt.

S/N SB-All to S/N SB-End Production

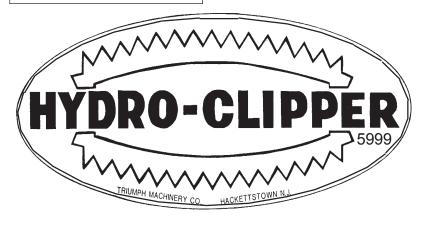

Item	Part No	Part No.	Qty.	Description
	New #	Old#		
	0444600	4446		Swathboard Kit, Optional
1	0442400	4424	1	Swathboard Asy, RH Model
2	0381000	3810	1	Carriage Bolt, 2-3/4" Long
3	0380900	3809	1	Spring
4	0019200	192	1	Washer
5	0247100	2471	1	Stop Nut

NOTE: This can ONLY be used with the optional Agricultural Outer Shoe Asy which is optional order equipment.

#### P/N 02970354

P/N 0483700

P/N 0324700

#### **Models**

The Following Data is Standard for all **Units** 

#### **2500 Model**

D2500 = Open Center Hydraulic System S2500 = Closed Center Hydraulic System Break-A-Way style shared with D & S Type

#### **3500 Model**

D3500 = Open Center Hydraulic System S3500 = Closed Center Hydraulic System Break-A-Way style shared with D & S Type

**5500 Model** (2500 Modle with LH & RH Wings)

#### **6000 Model** (See 2500 & 3500 For Parts)

D6000 = Open Center Hydraulic System S6000 = Closed Center Hydraulic System Break-A-Way style shared with D & S Type

#### **7500 Model** (See D8500 & S8500 After Nov. 1984)

D7500 = Open Center Hydraulic System S7500 = Closed Center Hydraulic System See Note Below about 7500 Model

#### 8500 Model (Also Known as the Pitmanless Arm Model)

D8500 = Open Center Hydraulic System S8500 = Closed Center Hydraulic System Break-A-Way style shared with D & S Type

#### Note:

The 8500 & 7500 shared most Cutterbar Parts, Motor Parts and some others, The Breakaway on the 7500 Series was similar but not the same as the 2500 Series. In 1984 there were some 7500 Model where the Break-A-Way was switched over to the 8500 Type (on a Special Puchase). When ordering parts for the 7500 model Always check which Break-A-Way style before ordering parts.

#### Oil Flow, Pump & Motor (Open Center Models)

#### The Following Data is Standard for all Open Center System

Mounted with Alamo (Triumph) Pumps (Open Center Only)

1.		Pump Output (GPM)	Tractor Engine (RPM)	Pump PSI (PSI)
	A.	9.5 GPM	1500 RPM	2000 PSI Max.
	B.	12.2 GPM	2000 RPM	2000 PSI Max.
	C.	15.0 GPM	2500 RPM	2000 PSI MAx.

- 2. Governor rated @ 20 GPM Maximum Input. 8 GPM (9 GPM optional) priority Flow, Excess flow returned to reservoir. Pressure drop approimately 50 PSI @ 8 GPM.
- 3. Control valve rated @ 20 GPM @ 2000 PSI Max. Built in relief valve set @ 1650 PSI. Pressure drop approximately 35 PSI @ 8 GPM.
- Reservoir Capacity Using Alamo (Triumph) Tank. (Old or New Style Tank)
   Old Reservior System = Reservoir 6 quarts, Total system capacity 7.5 to 8 quarts.
   New Reservior System = Reservoir 2.5 gal. & Total system capacity 3.5 gal. (2.5 gal measureing to sight glass in tank)
- 5. Recommended Oil 10W.30 or 10W.40 MS, This was changed in the early 1990's to a Universal Hyd Oil. Either Oil Will function in unit to specifications.
- 6. Oil Filter = 100 micron reusable type.
- 7. System Operating Pressure:

A.	Free Running Knife (No Work Load)	100 to 1250 PSI
B.	Average Cutting, Roadside Grass	400 to 500 PSI
C.	Dense Grass & Most Weeds	500 to 800 PSI
D.	Dense Weeds, Light Brush & Vines	800 to 1200 PSI
E.	Control ValvePressure Relief Setting	1700 PSI Max.

- 8. Operating Temperature in Dense Material @ approximately 800 to 1200 PSI = 70 to 90 deg. F. above ambient Temperature in continuous cutting, Material, RPM, Ground Speed and Mechanical conditions on Components can make this vary. Lighter cutting conditions should decrease temperature as worn component or heavy material will increase it.
- 9. Power Requirements (General Rule of Thumb) = 1 HP per Foot of CutterbarA. This rule can vary depending on material being cut and terrain.

NOTE: All of the above applies as well to Mower Models operated from the Tractor Hydraulic Supply, providing pump capacity and pressure ratings are compatible torequirements above. Also these must be free for supply to mower and not be shared with some other Tractor funtion.

ABOVE INFORMATION WILL NOT APPLY TO CLOSED CENTER SYSTEMS

#### Control Valves, Open Center & Closed center Systems

#### **Open Center System**

- This used an add on Pump, Supplied by manufacturer (Alamo/Triumph) that was run off the front of the Engine or PTO through a Speed Changer. This supplied the Pressure for Hydraulic Cylinder Operation as well as to the Motor Operation.
- 2 This System Used an Aux. MountedTank for the Oil, There were three Tanks Used.
  - 1 st. First was an Oblong Square type that was mounted to a Bracket using Straps, This Tank has become obsolete and will have to be replaced with the second tank by making modifications.
  - 2 nd. Second was a larger Tank that is taller and has the Mounting Brackets welded to it, This tank increased th Oil capacity by about one Gallon. This is also the Last Tank Used for the Single Wing Models.
  - 3 rd. This Tank was ONLY USED on the Dual Wing Models and is built basically the same as thr 2 nd. Tank but with a larger Oil Capacity to accommodate the Dual Wing units.
- 3. Governor rated @ 20 GPM Maximum Input. 8 GPM (9 GPM optional) priority Flow, Excess flow returned to reservoir. Pressure drop approimately 50 PSI @ 8 GPM. was only uded on the Open center models
- 4. Control Valve is a 3 Spool (one Valve) System for Cylinder & Motor Controls

#### **Closed Center System**

- 1. This WILL NOT use an add on Pump. The Hydraulic Oil & Pressure and Supply is provided by the Tractor Hydraulic System for all functions
- 2. The Oil is from the Tractors internal Hydraulic Supply and NO EXTERNAL Hydraulic Tank is used on this type.
- 3. The Governor is NOT USED on the Closed Center System, It is controlled by the Valves through restrictors & Check valves.
- 4. There are 2 control Valves Used, a 2 Spool Valve for Hydraulic Cylinder Controls and a separate 1 spool Valve for Motor Control.

#### **VALVE NOTES:**

There were some Closed Center Systems that were converted to Open Center by
modifing the control Valves so the Closed Center could be moved to a Open Center
Tractor, See Control Valve Section for Parts that would have been used. All Models
shared the Control Valves, It is the Open Center or Closed Center Hyd. System that is
important.

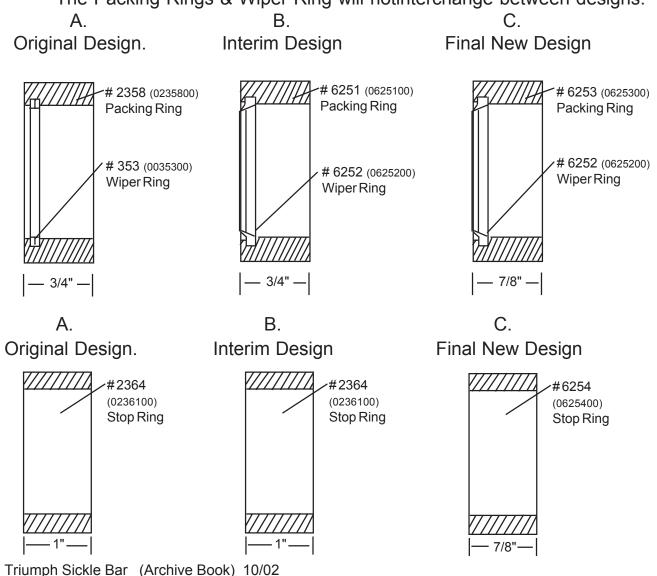

#### Control Valves, Valve Notes Continued

© 2002 Alamo Group Inc.

- 2. The Valves were changed, in most cases the Replacement valve may require that the routing of Hosed and/or fittings may have tor be changed.
- 3. Due to the change in owner ship, A fire destroying the Plant, The 40 some years of production of this Product, The Many changes of Personel, the Moving of Plant Facility. We are unable to pin point Serial Numbers for this product only Dates. It will be required to match feature of Valves to determine which valve you have. Look for manfacturers Name, Locations of features, Ports, Handles & ETC.

## Hydraulic Cylinders # 2401 & 2402 Packing Rings & Wiper Rings & Stop Rings

Change in Feb 1981 of the Packing, Wiper & Stop Rings, TheNew design will replace the Old design as parts even though width of them is different The Packing Rings & Wiper Ring will notinterchange between designs.

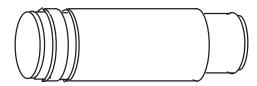

Parts Section -133

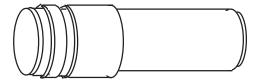

#### Hydraulic Cylinder # 2401 Stop Rod

Feb. 1980 the Stop Rod design was changed on the # 2401 (0240100) Curb Stop Cylinder. The Stop Rods look different in the way they are made but they will interchange with each other without any modifications.

A. Original Design (Old Style) Jan. 1980 & Down

B. Replacement Design (New Style) Feb. 1980 & Up

NOTE. The Above Stop Rods , Old & New Rods are completely interchangable and will perform the same functions without any difference in operation.

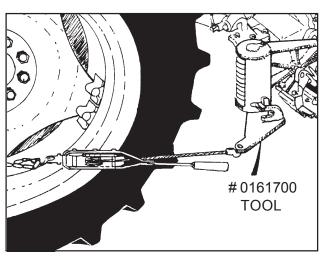

#### Single Wings / Dual Wings

- 1. Single Wing Units use 1 Set of Valve to operate Cylinder & Motor Functions, Dual Wing Units will use 2 sets of same valves for these function.
- When ordering parts for a dual wing unit some parts will be the same on both sides and others will be a Mirror Image of each other, Always check which side on dual units and check if part numbers are the same.
- 3. Dual Wing units used a Flow Divider Valve to split flow between the LH & RH units. This Valve creates a Tee of the Pressure Hose from Pump forceing equal amounts to each side. This Flow divider is Mounted near Pump & Tank, See Dual Tank Parts Section or the Original Mounting Instructions you recieved with your Unit for Flow Divider Valve #.

#### Break-A-Way, Assemble or Dis-Assemble

#### 2500 & 3500 Models

- 1. DO NOT ATTEMPT this without Tool # 0161700 (Old # 1617) and following Instructions as shown in Figure 1 and Figure 2. Tool No. 0161700 is Optional Purchase & not furnished with Units.
- 2 Tension on Springs are very severe, DO NOT REMOVE bolts on Spring Lock till tension on spring has been removed from against the Stop Block.
- When releasing pressure on Spring release puller slowly notch at a time till all pressure is released and then the Break-A-Way assembly can be dis-asembled.
- When the Spring is re-installed & the Tool # 0161700 is used to re-load Spring Tension pull on tool till Spring clears Bolt Holes for Spring Stop Block, After Bolting & Tightening down Stop Block begin to slowly release pressure on spring till Spring touches Stop Block.
- 5 Remove Tool # 0161700 from Unit before operating Cutter.

HYDROC

FIGURE 1

FIGURE 2

#### 3500 Models

- 1. See Figure 3 to the Right.
- 2. To Adjust Break-A-Way on the 3500 Model, Tighten or loosen the Spring Adjusting Bolt, Tighten for more tension and loosen for less tension.
- DO NOT Tighten till Spring is bottomed out, this WILL Damage Break-A-Way Components.

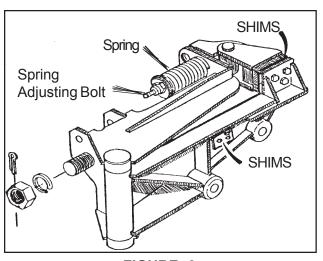

FIGURE 3

#### Model / Mechanical / Hydraulic Improvements

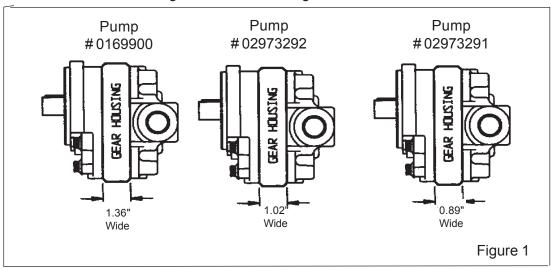

There Have been a number of changes/ Improvements made to various Parts / Design, Some are listed below as a History reference.

#### **Mechanical Improvements**

- 5/16" thick high abrasion resistant steel is added to the wear surface of the inner Shoe Sole (P/N 0585500) and to the Motor Guard (P/N 0586000). This provides provide for increased durability and life of the components.
- 2. The "J" shaped mount which attaches the Butt end of the Curb Cylinder to the Main Mounting Beam (P/N 0341600) has been gusseted on two sides. This is to prevent deformation of the Main Beam during activation of the Cylinder.
- 3. The Plate which supports the front of the **Head Tilt Pin** has been increased from 1/4" to 1/2" for increased strength. **Hardened Bushings** were added in the **Pin Knuckle** to reduce wear in the Head Tilt Pin area.
- 4. Gussets have been added to the Cutterbar Support in order to reduce the possibility of damage due to rapid recoil of the Break-A-Way function.
- The **Block** which retains the **Break-A-Way Spring** at the proper tension has been made to provide increased strength, It has also been notched to provide increased holding capability. There were 2 more holes added to allow for an optional adjustment of less **Spring Tension.**

#### **Hydraulics Improvements** (Aux Front Mounted Pump Only)

- **1. PUMPS** (See Figure 1)
  - A. The Old Front Mounted Pump # 0169900 with a 1.48 CID was rated at 1200 to 2500 RPM (Engine Speed) the the flow was controlled by a Governor till May 1998.
  - B. In may 1998 this changed, Pump would now match the RPM of Tractor, (Required Engine RPM to produce 540 PTO Speed), Pump # 02973292 w/ 1.02 CID rated for RPM from 1800 to 2100 Engine RPM. Pump # 02973291 w/ 0.84 CID rated f/ RPM from 2101 to 2500 Engine RPM.
  - C. The Flow Governor was removed with these newer Pumps as it was not needed, This also changed the Hose Routing when Governor was removed.

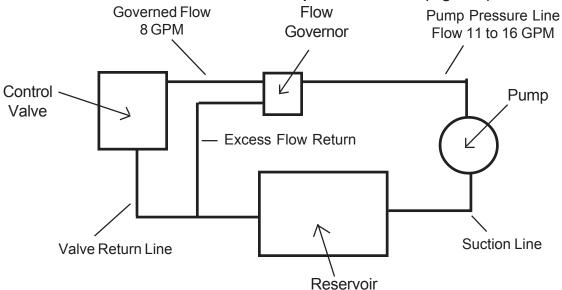

#### **Continued From Previous Page**

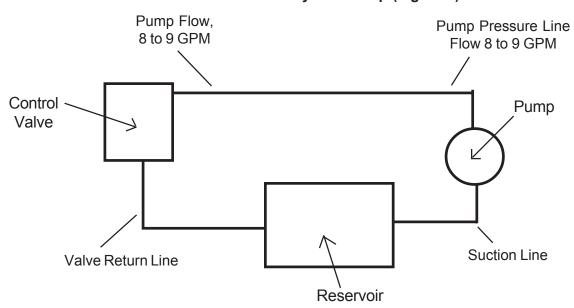

#### **Hydraulics Improvements** (Aux. Front Mounted Pump Only)

- 1. Hoses Routing (See Figure 2 & 3)
  - A When the Pumps were changed in May 1998 the Governor was dis-continued in system, This changed the Hose routing that was used previously.
  - B. System is required to hold 8 to 9 GPM to Operate Correctly, Routing & Type Pump is Crittical to operation. Hose Routin & use of Governor MUST be to Match whitch Pump is used, If converting to new style Pump it will be regired to change Hose rRouting. See Diagrams below.

#### OLD HOSE ROUTING w/ Governor Apr. 1998 & Down (Figure 2)

#### NEW HOSE ROUTING w/o Governor May 1998 & Up (Figure 3)

#### Hydraulics Improvements (Aux. Front Mounted Pump Only)

- 1. Converting Pumps, (Old Style to New Style)
  - **A.** Determine which Pump you currently Have mounted to the front of the Tractor, See the Pump Parts section on how to ID Pump First.
  - **B.** Pump MUST be chosen to match Tractor Engine RPM when converting to new style Pump, This Engine RPM is determined by the Engine RPM required to operate Tractor PTO at 540 RPM.
  - C. Old Style Pump # 0169900 ( Used an Aux Flow Governor Mounted with it)
    New Style is Pump # 02973291 or # 02973292 depending on Tractor RPM
  - D. Old Style Pump # 0169900 is rated 1200 to 2500 RPM w/ Flow Governor New Style Pump # 02973291 is rated 2101 to 2500 RPM (No Governor Used) New Style Pump # 02973292 ie rated 1800 to 2100 RPM (No Governor Used)
  - E. Hose (Pump Pressure Line) must be made longer by approx 1 foot, This can be done by adding section to Hose (do not restrict Flow when doing this) or by changing to a longer Hose, See Hose List below and See Figure 2 & 3 on previous Page for Pump Pressure Line.

#### **Pump Pressure Line Only**

Using Hose #	<sup>£</sup> & Size	Use Longer	Use Longer Hose # & Size	
0033100	52.5" Long	=	0022000	66" Long
0599600	54" Long	=	0022000	66" Long
0040400	60" Long	=	0180600	72" Long
0180600	72" Long	=	0151400	84" Long
0110800	78" Long	=	0057500	90" Long
0151400	84"" Long	=	0318500	96" Long
0057500	90" Long	=	0496400	102" Long
0318500	96" Long	=	0573200	108" Long

#### **Design Changes** (All Models Affected)

#### 1. Cutterbar Shape Changed

A. The Design of the Cutterbar was changed to Material Availability from a Stepped Bar to even Shape Bar. This Change made the guards to be changed also, The Old bar is called the 3/4" Bar & the later Bar was called the 5/8" Bar. See Drawings in Figure 4 for Old Style Bar & Figure 5 for New Style Bar. This also made a change in the Knife Guards.

#### Hydraulic Supply Types (Option)

- Internal Tractor Hydraulic Supply used. Tractor Pumps
  - **A.** Uses a Two Spool Valve for the Operation of Hydraulic Cylinders and a serprate One Spool Valve for the Cutter Motor Control.
  - **B.** These controls were usually Closed Center Type, But there are kits to convert them to Open Center Type Control Valves.
- 2. Loader / Tractor Hydraulic Supply used. Tractor Pump or Add on Loader Pump.
  - **A.** Uses a Two Spool Valve for the Operation of Hydraulic Cylinders and a One Spool Valve for the Cutter Motor Control.
  - **B.** These controls were usually Closed Center Type, But there are kits to convert them to Open Center Type Control Valves.
- 3. PTO Mounted Aux Pump Hydraulic Supply used. 540 RPM PTO Only
  - **A.** Uses a Three Spool Valve for the Operation of Hydraulic Cylinder and Cutter Motor Control. (two spools operate Cylinders & one Spool operates Motor Control.)
  - **B.** These controls are Open Center Type and were not available as Closed Center at all.
- 4. Front Engine Mounted Aux Pump Hydraulic Supply used.
  - **A.** Uses a Three Spool Valve for the Operation of Hydraulic Cylinder and Cutter Motor Control. (two spools operate Cylinders & one Spool operates Motor Control.
  - **B.** These controls are Open Center Type and were not available as Closed center at all.
  - C. Before May 1989 the Pump used a Governor to limit the Flow to 8 GPM and Pump was design to run 1200 RPM (Engine Speed), But because many operators wanted to exceed this speed the Governor had to be used.
  - D. After May 1998 this system was redesigned to a match tractor engine RPM (Speed that is reguired to run PTO at 540 RPM), Earlier they were controlled with a Flow Governor. The Flow Governor was not Used after May 1998 and there were two different Pumps offered, one was for 1800 to 2100 RPM and the other was for 2101 to 2500 RPM. See previous 3 Pages for details on Pumps.

#### INSTALLATION INSTRUCTIONS

INSTRUCTIONS FOR ALAMO GROUP SICKLEBAR MOWERS (Built by Triumph)

Model 2500 Hydro Clipper Model 3500 Utility Model 8500 Pitmanless Hydro Clipper

#### **RECEIVING INSTRUCTIONS:**

- 1. Your mower was partially pre-assembled and adjusted at the factory when originally Shipped. The mower was shipped in three or four separate packages.
  - Package 1 --- Contained the complete mower body assembly in a large carton.
  - Package 2 --- Contained the cutterbar assembly and knife.
  - **Package 3** --- Contained the attaching subframe(s) and other large brackets to fit the particular tractor on your order.
  - **Package 4** --- Contained the pump & attaching parts. Usually shipped in package 1 carton.(Not required for installation which uses the tractor or loader pump)
- 2. The mower should have been mounted following the step-by-step sequence given. Before mounting any part or assembly, **READ MANUAL**. Give careful attention to all notes on pages concerning the parts being installed, for specific information, and FOLLOW INSTRUCTIONS! If you have problems or are not sure of instructions, STOP and call our Service Department for help. **NO PARTS Should have to be Modified unless instructions indicate it!**
- **3. DO NOT** use teflon or other pipe joint tape on fittings or hose connections.
- 4. After pump is installed **NEVER run the engine until the system is filled with oil!** The pump will be destroyed if run even for a short time **without lubrication!**
- **5. Do not use teflon or other pipe joint tape** on Pump & Valve Fittings or Hose connections. because pieces of Tape may get into system or heat of Oil when Unit is ran may melt tape.
- 6. After pump is installed do not run the engine until the system is filled with oil! The pump will be destroyed if run even for a short time without lubrication.

#### **MOUNTING ON BARE TRACTOR:**

- 1. Remove all parts from shipping cartons and lay them out for identification. Separate hardware for easy use as needed.
- 2. Install the attaching parts to the tractor as described on page marked "Subframe Kit." Install subframe and valve bracket cap screws and lockwashers loosely and tighten only after all fasteners have been started. NOTE! Shimming may be required for proper alignment.
- 3. Install pump bracket, pump & tank For tractors using front mounted pump, install pulley adapter to crank shaft of engine, next determine & cut the jackshaft to length. Preassemble the jackshaft, pump bracket, flexible coupling, and pump as a unit. Then, install this unit to tractor with fasteners provided. Also install tank at this time. NOTE! To get longer life from splined jackshaft & pulley adapters, we recommend the splines be coated w/ LUBRIPLATE MO-LITH #2 or equivalent. IMPORTANT! After pump is installed do not run the engine until the system is filled with oil! The pump will be destroyed if run even for a short time without lubrication.
- 4. Assemble the lift and breakaway to the subframe with the 1 -1/2" carriage pin thru the subframe trunnions. Line up the roll pin holes; insert the roll pin and drive it in place.
- 5. Attach the curb lift cylinder to the carriage and sub-frame lug with the clevis pins and cotter pins. NOTE! Cylinder plunger end goes on the Sub-Frame lug.

#### INSTALLATION INSTRUCTIONS

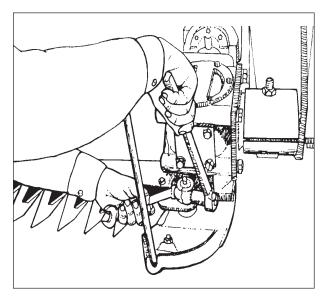

- **6.** Assemble hydraulic governor to the valve using parts described on page marked "Hydraulic Kit Valve Mounting", and then attach the valve to valve mounting bracket.
- 7. Connect the hydraulic circuit in accordance with parts book on page marked "Hydraulic Kit Pump and Tank Mounting," tank to pump, pump to valve and so on. NOTE: Be sure to connect Motor Hoses as shown on page marked Hydraulic Kit (Valve Mounting) for proper motor rotation. Use a paste sealer on all pipe thread connections. NOTE: DO NOT USE TEFLON TAPE! CAUTION: Do not over-tighten connections. Cracked castings, due to overtightening will not be covered under warranty. The 1699 pump requires that you take special care when installing fittings in it; the port housing is aluminum.

#### 2500, 3500 CUTTERBAR ASSEMBLY:

1. Attach the cutterbar assembly to the lift and breakaway using (4) capscrews and lockwashers supplied with cutterbar assembly. Install the knife and attach the pitman arm to knifehead ball. The knife should slide smoothly into its guides. DO NOT FORCE IT! Use a drift or screw driver to latch the fork. NO HAMMERS! Refer to Page #20 and Fig #18. Handle knives with care. Knife sections are razor-sharp. Wear gloves and hold knifehead end and the knife back.

#### 8500 CUTTERBAR ASSEMBLY:

1. Remove long capscrew from drive housing and slip drive unit from lift and breakaway. Attach the inner shoe and cutterbar assembly to the drive unit using the four special self-locking capscrews and serrated lockwashers provided. (See Page 1 of "Assembling instruction and parts list pitmanless mower.") Do not use lubricants on threads. Slip the completed assembly back into the drive unit support and install the long capscrew and self-locking nut and tighten to 270 ft. lbs. Next, install the knife by withdrawing the knife drive pin part way from drive arm. Slide the knife into the cutterbar and under the drive pin. The knife should slide smoothly into its guides. **DO NOT FORCE IT!** Then push the drive pin down into the knife head. Install and tighten the retaining cap screw to 75 ft. lbs. of torque. See Fig. #1 and #2.

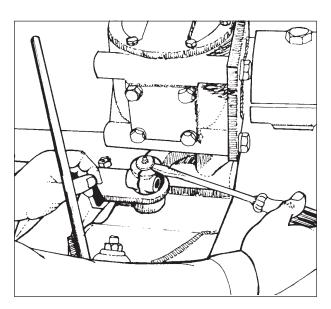

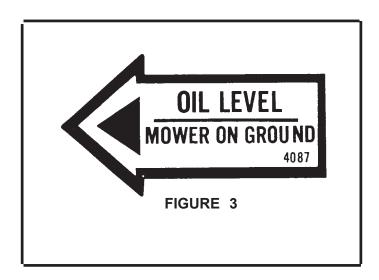

FIGURE 1 FIGURE 2

Triumph Sickle Bar (Archive Book) 10/02 © 2002 Alamo Group Inc. Parts Section -141

#### INSTALLATION INSTRUCTIONS

#### **HYDRAULIC OIL:**

- 9. Fill the hydraulic tank to level of center of sight gauge. Then start engine and at the same time have someone continue to fill the tank so the pump does not cavitate (run dry). Lift and lower the mower for several cycles to remove all air from the system. Return cutterbar to the floor and recheck oil level. Add oil if necessary to center of sight gauge. See Fig. #3 Below.
- 10. Lubrication Your mower has been lubricated at the factory at all required points except: carriage pin, knifehead connection, cutterbar wear plates, clips and knifehead guides. NOTE! Refer to the service instructions for lubrication of these points plus adding new lubricant to all points listed. before Operating.
- 11. **Installing guards** Lift mower to transport position. Install transport pins. Stop engine! Then install motor guard, pitman guard, inner shoe sole, and grass rod. Bend grass rod to desired angle.
- 12. **8500 mowers only** have inner shoe sole and grass rod to be installed.
- 13. Install decals Some decals are shipped in a "Decal" envelope. All decals should be attached in their appropriate location. If decals are damaged, replacements will be supplied upon request. See Decal Section for decals.
- 14. Set the tractor wheels for tread and weight. For tractors with adjustable tread it is advisable to set the wheels, front and rear, to the widest tread setting consistent with the work to be done. Some mountings will not permit full front tread adjustment on mower side. For banks and ditch work, the rear wheel opposite the mower should be weighted and the tire filled with calcium chloride and water as an added overturn safety precaution.

#### **OPERATIONS**

#### **KNIFE SPEED:**

All current model Triumph mowers are equipped with an overspeed control governor which regulates the flow of oil to the motor and provides a constant knife speed regardless of tractor engine RPM. The operator may select the engine RPM and transmission gear range to suit mowing conditions without affecting the knife speed. Tractor-loader-mower combinations and mowers powered from the tractor's built in pump must be operated at an engine RPM sufficient for the tractor or loader pump to produce a flow of 8 GPM minimum .

#### TRACTOR MOWING SPEED:

The best mowing speeds are usualy between 1-3 MPH. Conditions will vary with the material being cut and the terrain, but select a speed producing the desired result and try to maintain that speed. If too much material falls on the cutterbar, increase the speed slightly. If grass is being torn out, slow down to allow the knife time to cut clean. If the cutterbar breaks back frequently when cutting heavy dead grass, brush, or vines, slow down to allow the knife time to cut clear and clean.

#### **CUTTER BAR BREAK-BACK: (Break-A-Way)**

Never allow the tractor to roll back with the rear edge of the cutterbar against an obstruction; severe damage to the carriage will result and lead angle will be destroyed. When the cutterbar strikes an obstruction while traveling forward, it will break back against the return spring on 250-8500 models or release the safety latch on 3500 models. The cutter bar will return automatically to cutting position on 2500-8500 models and will have to be re-latched on 3500 models. Refer to Page #17 and Figures #12 & #13.

#### **IMPORTANT:**

Do not slide the cutter bar past the obstruciton. If necessary, back up, adjust the bar to clear the obstacle and proceed with mowing. If the cutter bar assembly is allowed to repeatedly "slam" back into a work position (perpendicular to the tractor centerline) the tractor and the cutter assembly may become damaged. If the knife jams or stalls on a cable, heavy brush or other debris, it can most often be cleared by moving the Control #3 to the off (center) or reverse position. If you are unable to clear unit in this manner, you may have to clear it by hand. Make certain that Control #3 is in the off (center) position and the engine is shut down before clearing by hand. Refer to Valve Operation for more detail. For John Deere closed center system, bleed off accumulator pressure before working on mower! Refer to decal on tractor and tractor operating instructions.

#### **WARNING:**

DON'T LOSE YOUR FINGERS **NEVER TOUCH THE KNIFE OR CUTTERBAR WITH THE VALVE TURNED ON OR THE ENGINE RUNNING ON TRACTOR**: IT MAY START UP SUDDENLY WHEN YOU LEAST EXPECT IT!

#### **TURNING CORNERS:**

Triumph mowers will cut neat, square corners. It is seldom necessary to raise the cutterbar at corners. Turn quickly when near the end of cut using brake to pivot right-hand wheel of tractor when making turns to the right. When turning corners to the left, run tractor in low gear. The cutterbar swings around faster when turning in this direction and increases the possibility of striking an unnoticed post or some other obstacle. Be very careful when working on hillsides. Move slowly over rough terrain. Avoid sharp turns on steep slopes. Adjust speed to the conditions of the terrain. Watch out for rocks, stumps, soft edges, deep holes, electrical lines, and low overhead clearances. When mowing a ditch, the tip of the cutting bar is in the ditch. When you want to come out, be sure to turn out of the ditch never into the ditch.

#### **OPERATIONS**

#### TRANSPORT:

- 1. When transporting the tractor and mower, use the two transport safety pins and hair pins provided with the mower. Install usin following Steps:
- **2.** Shut off the mower motor. Control #3.
- 3. Raise the cutterbar to the vertical position with Control #1. Insert the short carriage transport pin thru the subframe clevis and behind the carriage lug. Insert the hair pin.
- **4.** Shut off the tractor engine.
- **5.** Lower the cutterbar very little with Control #1. Insert the long cutterbar transport pin thru the holes in the knuckle and carriage outer end from the front. Insert the hair pin.
- **6.** Make sure all three control levers are in the center position before restarting the tractor.

#### WINTER STORAGE:

- 1. Some precautions will prevent rusting and corrosion of working parts.
- **2.** Clean off all dirt and debris.
- **3.** Tighten loose bolts.
- **4.** Grease the knife sections and wearing parts on the cutterbar.
- **5.** Apply a light coat of grease to the cylinder plungers and valve spools on exposed surfaces.
- **6.** Drain and refill the hydraulic system.
- **7.** Replace missing fasteners, nuts, bolts, cotter pins, hairpins, etc.
- **8.** Note and order any new parts needed for the next season.
- **9.** Steam clean and repaint the mower if necessary.
- **10.** Cover the mower with a tarpaulin or store indoors.

#### **GENERAL INFORMATION:**

- 1. Operators should be aware that sickle bar mowers are precision cutting machines.
- 2. They are designed to cut like a pair of fine shears but are subjected to the roadside punishment of a bulldozer!
- **3.** If the mower is not cutting properly, the operator must be prepared to make on-the-job adjustments to assure good cutting and avoid costly repairs.
- **4.** Keep a grease gun, oil can, heavy hammer, screw driver, and proper size wrenches on the tractor at all times.
- **5.** Since most of the day-to-day problems originate in the cutterbar, operators should keep the cutterbar in adjustment and make sure that the knife is sharp.
- **6.** Refer to the service instructions for specific adjustments and information.
- **7.** To save time, it is recommended that spare knives and rockguards be carried on the tractor for replacement on the job.
- **8.** Follow the daily lubrication procedures given in the service instructions.
- **9.** Keep all nuts, bolts, and screws tight.
- **10.** A carefully adjusted and maintained mower will make the job easier and reward you with outstanding performance, long life, and reduced maintenance

This safety alert symbol is used to point out areas requiring precautions for your safety. Failure to observe these warnings could result in injury to you. **DO NOT** attempt to make adjustments **with the mower or tractor running!** 

For **John Deere closed center system**; **bleed off accumulator pressure before working on mower!** Refer to Decal on Tractor and Tractor Operating Instructions. For continued good cutting and trouble-free operation, it is important to follow these instructions accurately.

**LUBRICATION:** Always Shut off the tractor engine and remove key before lubricating the mower.

#### Greasing:

Wipe dirt from grease fittings and grease gun nozzle before greasing. Replace missing or damaged grease fittings immediately. Use a good grade of #2 bearing grease or SAE #2 multi-purpose grease where grease fittings are provided. Do not over-lubricate. Stop as soon as clean grease emerges from the joint.

#### Oiling:

Use SAE 30 oil on all lubrication points without grease fittings. DO NOT FLOOD WITH OIL. A few drops at the right place will do the job. Excessive oil picks up dirt or grit and causes unnecessary wear.

### **Lubricate Daily (See Next Page Instructions)**

- 1. Knuckle bolt.
- 2. Knuckle pin (3500 model)
- 3. Carriage pin
- 4. Spring release pin (2500 & 8500 models)
- 5. Latch roller (3500 model)

#### **Lubricate Several Times Each Day (See Next Page Instruction)**

- 1. Pitman bearing (2500 & 3500 models)
- 2. Knife head connection (2500) Knife Drive Pin (8500)
- 3. Knife head guides (2500 & 3500 models)
- 4. Knife wear plates and clips.\*

Lubricate the cutterbar support rocker pin every 50 hours. It is a good practice to put a few drops of oil on cylinder clevis pins and control valve handle links occasionally. This will allow them to work easily and prolong their life.

#### **RESERVOIR OIL:**

**NOTE!** Dirty oil can destroy the hydraulic system. Dirt scores valve spools and cylinder plungers and gouges metal from pump and motor thrust plates, gears, and housings. If mower performance is lagging or system is running hotter, very likely the cause is dirty oil.

<sup>\*</sup> When working in very dusty or sandy conditions, it may be better not to lubricate these at all.

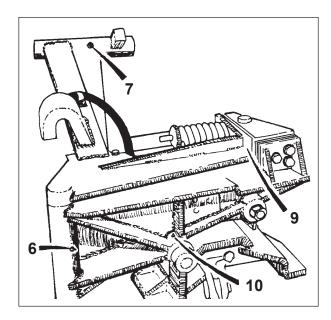

FIGURE 5

Lubricate every two hours of operation. (Inspect all parts carefully at same time).

- 1. Pitman bearing (2500 & 3500 models) Figure 8
- 2. Knife head connection Figure 6
- 3. Knife head guides (2500 & 3500 models) Figure 6
- 4. Knife wear plates and clips.\* Figure 7
- \* When working in very dusty or sandy conditions, it may be better not to lubricate these at all.

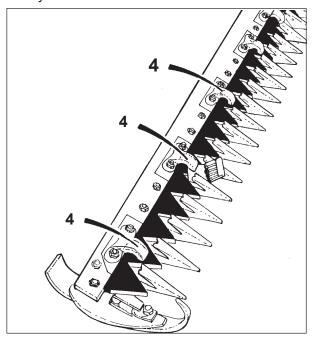

FIGURE 7

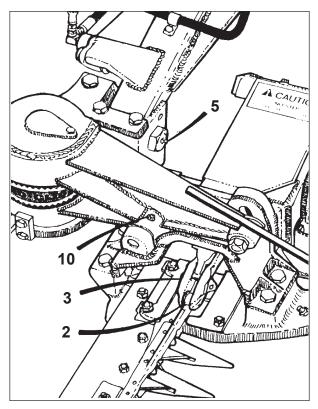

FIGURE 6

#### **Lubricate Daily**

- 5. Knuckle bolt Figure 6
- 6. Knuckle pin (3500 model) Figure 5
- 7. Carriage pin Figure 5
- 8. Spring release pin (2500 & 8500 models) Figure 8
- 9. Latch roller (3500 model) Figure 5
- 10. Rocker Pin every 50 Hr. (2500-3500 Mod els) See Figure 6

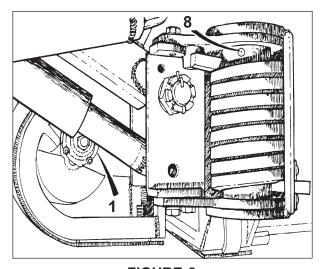

FIGURE 8

Triumph Sickle Bar (Archive Book) 10/02 © 2002 Alamo Group Inc.

Parts Section -146

**NOTE!** Dirty oil can destroy the hydraulic system. Dirt scores valve spools, and cylinder plungers and gouges metal from pump and motor thrust plates, gears, and housings. If mower performance is lagging or system is running hotter, very likely the cause is dirty oil.

#### CLEANING HYDRAULIC RESERVOIR:

- **1. After first 20 hours of operation**, drain and clean reservoir in the following manner.
  - A. Drain oil and remove any metal filings which may have accumulated on the magnetic drain plug in the reservoir.
  - B. Remove top plate from reservoir containing filler neck and breather.
  - C. Reach through hand hole and unscrew filter element.
  - D. Wash filter in clean kerosene or diesel fuel and blow dry.
  - E. Carefully wipe out inside of tank with clean lint-free material.
  - F. Replace filter element and magnetic drain plug and tighten.
  - G. Replace hand hole cover but not the breather.
  - H. Refill with Universal Tractor Hydraulic Oil to midpoint of sight gauge. **NOTE! DO NOT START THE TRACTOR ENGINE WITH AN EMPTY RESERVOIR.**
  - I. Replace breather.
  - J. Make sure the system is free from any leaks. It can be very dangerous looking for leaks by hand without some type of protection like very heavy gloves and a piece of cardboard wrapped around the hose. Move the cardboard up and down the hose and fittings to find leaks - Not your hand.
- **WARNING! REMOVE HYDRAULIC PRESSURE** prior to doing any maintenance.Place the cutterheads on the ground, OR SECURELY BLOCKED UP, disengage the PTO, and turn off the engine. Push and pull the control lever in and out several times.
- Repeat cleaning after every 250 hours of operation or each mowing season, whichever occurs first.
- For mowers operating from the tractor's internal hydraulic system or tractor-loader hydraulic system, refer to the tractor manufacturer's manual for cleaning procedure and oil specifications.

WARNING! DO NOT ATTEMPT ANY SERVICING OR ADJUSTMENTS WHILE THE MOWER IS RUNNING. DISENGAGE THE PTO AND SHUT OFF THE TRACTOR ENGINE.

#### **CUTTERBAR ADJUSTMENTS:**

#### **Cutting Height:**

Triumph mowers are designed to cut above and below ground level with the cutterbar in the float position. If a cut is required when the inner and outer shoe soles are not in contact with the ground the cutterbar can be raised with the curb lift to the desired height. However, if continued high cuts are required, it is suggested that the inner and outer shoe soles be extended by welding on spacers and spring steel skids to the height desired.

**Pitch:** The entire cutterbar pitch angle can be quickly adjusted by loosening the single adjustment bolt and nut and tilting the bar up or down as desired. See Fig. #10 & #11. Retighten after adjustment.

The lead angle of the cutterbar on 2500 and 8500 models is preset at the factory at 3/16" per foot and is automatically maintained by the release spring. The lead may be changed, if desired. To reduce the lead, build up boss "B" with weld See Figure 12. To increase the lead, grind down the height of the boss. The lead of the 3500 utility cutterbar can be adjusted by adding or removing shims from the cutterbar support See Figure 12. Extra shims will be required.

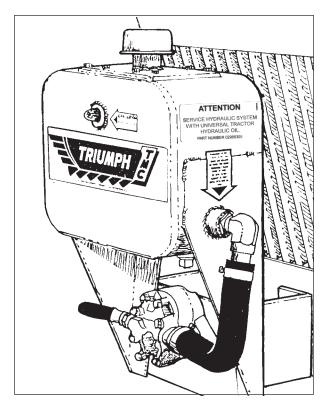

FIGURE 9

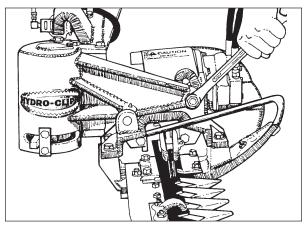

FIGURE 10 (2500-3500)

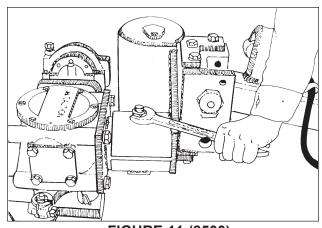

FIGURE 11 (8500)

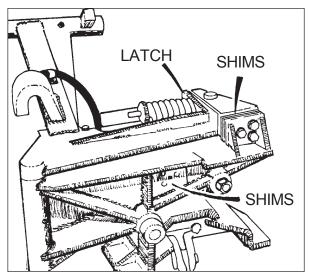

FIGURE 12

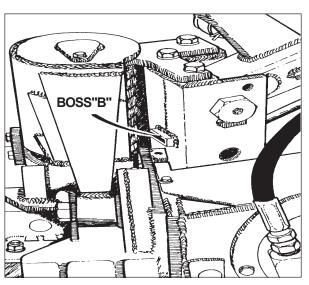

FIGURE 13

#### NOTE:

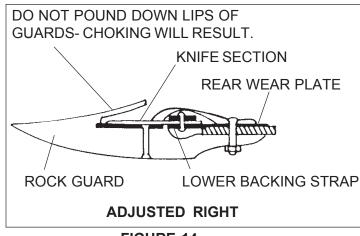

All cutting is done by the knife section passing over the ledger plate in the guard. It is vital that these sections are parallel with the ledger plates and in contact with them. See Fig. #14 & #15. The knife should move smoothly in the cutterbar guides and every knife section should rest on the ledger plate to make a shear cut. This means the guards, ledger plates, wear plates, clips and knife head caps must be in good condition and correctly set. If these parts become loose or worn, the knife will flop around in the cutterbar, chewing and tearing instead of cutting.

#### **GUARD ADJUSTMENT:**

1. To align the guards, the only method provided to accomplish this very important adjustment is to bend the guards into alignment with a hammer. No easier method has been found to adjust heavy duty quards which will stand up in rocky conditions.

NOTE: guards are cast from alloy steel. If they are worked too much, they will work harden and cannot be bent. In this case the guard must be removed from the bar also remove the ledger plate. Heat the guard to a cherry red and air cool. It will be annealed enough that it can be bent.

- 2. Raise the bar to about 45 degrees. Make sure the pitman is at the bottom of the stroke so the flywheel doesn't suddenly turn and catch your fingers in the knife. Shut off engine and set parking brake. FOR JOHN DEERE CLOSED CENTER SYSTEM, BLEED OFF ACCUMULATOR PRES-SURE BEFORE WORKING ON MOWER! REFER TO DECAL ON TRACTOR AND TRACTOR OPERATING INSTRUCTIONS.
- 3. Sight down the bar and look for a knife section in close contact with a guard ledger. If the section to the right and left are both 1/8" off the ledger, DO NOT bend the two side ones up until they contact the knife. This is WRONG! The high guard should be knocked down until all three contact. The higher up a guard gets bent, the more the knife section will tend to contact only the tip.
- 4. Bolt the guards tight and strike them at the thick part, just in front of the ledger plates. Do not pound down the guard lips as the knife might bind. Retighten the bolts as each guard is aligned. Disregard the position of the guard points. It is the ledger plates which must be kept in line. Blunt points should be filed sharp.
- 5. Starting from the inner shoe, adjust each guard so that the knife section and ledger are parallel and reasonably close to each other. Find the high guard and knock them down. Usually, the only time it is necessary to knock a guard up is when new guards are first installed on the bar.
- 6. Make certain that the first knife section is contacting the inner shoe ledger plate. If it doesn't contact, check the first or second guard which may be holding the knife up or the inner shoe ledger plate may be worn out. The first section must contact the inner shoe ledger plate or grass will be dragged under the head and bind the knife until it stalls. (Not applicable to 8500 model).
- **7.** Finally, align the industrial outer shoe in the same way as guards.

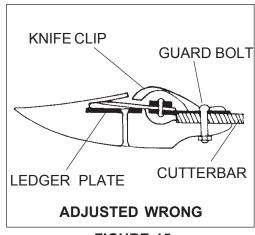

FIGURE 15

#### **WEAR PLATES:**

The wear plates must line up with each other to give the knife back a straight bearing along its entire length. Wear plates should project approximately 1/16" in front of the leading edge of the cutterbar after adjustment. Triumph wear plates are hardened on both edges. After the first edge has worn back, simply turn over the plate to obtain a new wearing surface. See Fig. #14 & #15, page #18.

#### CLIPS:

After all guards are adjusted, it is necessary to see that the knife clips are bent down to within 1/64" of the section. The easiest way to check this is to hold the knife down on the ledger plate and use a feeler gauge or the cover of a matchbook to measure the clearance. Do not attempt to hold the knife tightly against the ledger plate with the clips. Knock the clips down with a hammer. A light blow is all that is required. If the clips drag on the knife, pry them up. Drag will bind the knife and wear out the clip very rapidly. See Fig. #16 & #17.

#### KNIFE HEAD CAPS: (2500-3500 Models)

The proper clearance between the front and rear knife head caps and new knife head is set at the factory. As the caps and knife head wear, shims should be removed to maintain this clearance. Save these shims to be used with new knife or knife head. The clearance should be just enough to permit the knife to work without binding. Too much clearance will cause plugging and pitman vibration. Refer to the CUTTERBAR ASSEMBLY illustration in the parts list pages, covering these parts.

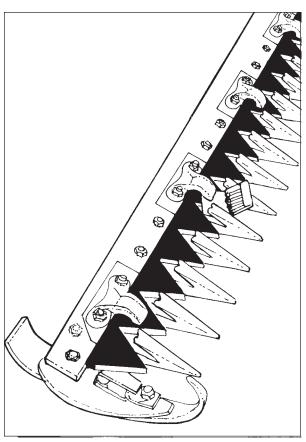

FIGURE 17

FIGURE 16

#### REMOVING THE KNIFE:

CAUTION! HANDLE WITH CARE. WEAR GLOVES. GRASP THE KNIFE HEAD AND KNIFE BACK.

#### 2500-3500 Models:

Insert a pointed tool into the hole in the pitman fork and rotate it upward and forward. It will snap over center---pry pitman arm upward off knife head ball. Slide knife out rear of mower. After installing new knife, snap pitman arm over knife head ball, and using pointed tool, rotate pitman fork upward and rearward. It will snap over center and lock the pitman arm to the knife head ball. See Figure #18, as well as Figures on other Pages.

#### 8500 Pitmanless Model:

Loosen knife drive pin clamping screw in the drive arm. Fit a screw driver into the small groove in the drive pin and pry up until the pin is free. Slide the knife out of the cutterbar. After installing new knife, push the drive pin down into the knifehead bushing. Tighten the clamping screw to **75 ft. lbs. torque.** See Fig. #19 as well as other Figures on other pages

#### KNIFE REPAIR:

ALWAYS USE A SHARP KNIFE. A dull knife cuts poorly, may plug, and doesn't do a clean job. Keep the knife straight with the sections firmly riveted to the knife back. When sharpening theknife, be careful to restore the **original shear angle and bevel of 23 degrees**. Properly and improperly ground knife sections are shown in the Figure #20 next page. A knife section that has been ground several times may have the proper angle and bevel and still be unserviceable because the hard cutting edge has been ground away and the section is too short to cut everything encountered. Replace worn or broken knife sections. **Triumph knife sections are heavy duty** sections made of **special steel** and will stay sharp for many more hours than conventional sections. Shear off the rivets rather than punch them out, as a punch will enlarge the holes in the knife back. Over a slightly open vise with the sections pointing down, strike the flat rear edge of the section a sharp blow with a hammer to shear the rivets. **WEAR SAFETY GLASSES** anytime you are striking these hardened steel parts. Chips off a knife section may cause injury or even loss of sight.

#### **KNIFE HEAD:**

#### 2500-3500 Models:

When the knife head ball has worn to the point where it is no longer held snugly by the pitman, the knifehead must be replaced. Follow the same rivet shearing instructions given above. **8500 Pitmanless Model:** 

If side play is evident between the knife drive pin and the knife head, it will be necessary to replace the bushing in the knife head. Use a one-inch diameter pipe or shaft and drive the plug out the bottom of the knife head. Be careful when removing plug not to deform it. Next press out the worn bushing; Replace plug and press in new bushing. Examine the knife drive pin at this time and replace it if it is loose in the new Bushing.

**Always use sharp ledger plates**. The ledger plates provide one half of the shearing action. Worn and dull ledgers should be replaced. To cut cleanly and efficiently, sharp ledgers are as important as a sharp knife.

#### KNIFE REPLACEMENT:

Triumph rock guards use bolt-on ledger plates. It is not necessary to remove the guards from the cutterbar. Follow this simple procedure to remove the ledgers. (Remove the knife from the mower first.)

- **1.** Raise the cutterbar off the ground and block up.
- 2. Using a punch, drive the bolt from the head end thru the guard. The head will shear off. It is not necessary to remove the nut.
- **3.** Scrape all dirt from the mating face of the guard.
- **4.** Snap in the new ledger and tighten the new bolt and nut. Make sure the ledger is down TIGHT in contact on its bottom face.
- **5.** Stake over or flatten the bolt on the nut side to make sure it does not become loose.
- **6.** Check and tighten the guard-cutterbar attaching bolt.

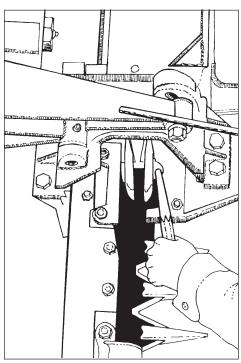

FIGURE 18

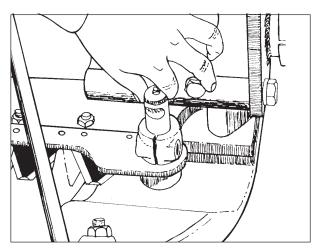

FIGURE 19

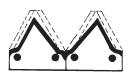

New sections - proper bevel and angle for good work.

Improperly ground sections - narrow bevel and wrong angle which changes the angle of 'shear'.

Sections properly ground even after repeated grinding, proper bevel and angle are retained.

Sections ground off center, destroying the register of blade in guard.

FIGURE 20

#### SHOE LEDGER PLATES:

Inner and outer shoe ledger plates are attached with rivets. These ledgers can also be replaced without removing the shoe.

- 1. Shear off the old rivets by a sharp blow with a hammer at the edge of the plate.
- 2. Scrape dirt off the shoe mating face.
- Install new ledger plate and rivets. Make sure they are TIGHT.

ATTENTION: Loose ledger plates can cause poor cutting and destroy otherwise usable

knives, guards, and shoes. **KEEP LEDGERS TIGHT.** 

#### PITMAN:

#### (2500-3500 Models)

Pitman parts should be replaced when they are worn. See the pitman assembly illustration in the parts book. Frequent lubrication and keeping bolts tight will prevent premature failure. ATTENTION: The connector plate is a safety fuse, which is designed to fail before more serious damage can occur to the motor shaft and other expensive parts when the knife jams. If the mower continues to break pitman connectors, look for other causes. DO NOT REPLACE WITH A HEAVIER CONNECTOR! USE ONLY TRIUMPH CONNECTOR PLATES and pitman parts.

#### FLYWHEEL:

#### (2500-3500 Models)

The flywheel is secured to the motor shaft with TWO set screws, one over the top of the other. The inner set screw locks the flywheel on the shaft. The outer set screw locks the inner set screw. It is important to check these set screws occasionally. Looseness at this connection can cause vibration, broken motor shafts and broken pitman parts.

#### KNUCKLE BOLT:

The knuckle bolt is adjustable to take up knuckle wear (Figure #23 & 24 on next page).

Adjust as follows:

- 1. Remove the cotterpin from the knuckle bolt.
- 2. Raise the cutterbar to the transport position.
- 3. Tighten the knuckle bolt nut to remove any end play between the carriage and knuckle.
- 4. Back off on the nut just enough to allow the cutterbar to return to the ground by gravity alone.
- 5. Re-install the cotterpin.

Improper adjustment of this connection can cause excessive vibration and wear if too loose and will prevent easy lifting and lowering of the cutterbar if too tight.

#### RETURN SPRING OR KNUCKLE REPLACEMENT:

#### (2500-8500 Models)

Return spring tension is not adjustable. To replace return spring or knuckle, use Triumph release tool #0161700 & come-along fastened to the rear wheel of the tractor. (Figure 21 & 22). Proceed as follows:

- 1. Install the release tool into the release pin.
- 2. Attach the come-along to the release tool and the tractor rear wheel.
- 3. Pull back w/ the come-along until the spring tang lifts off the stop block.(Figure 22, Next Page)
- 4. Remove the stop block and release spring tension with come-along.
- 5. Remove the 3 capscrews at the top and bottom of the support knuckle.
- 6. Remove the release pin.
- 7. Remove the spring support assembly from the cutterbar support.
- 8. Remove the knuckle bolt & knuckle (only if needs to be replaced). (See Fig. 23 & 24, next page)
- 9. Reverse the procedure to install new parts.
- 10. Retension the spring and install the stop block.

Use extreme care when winding or unwinding the return spring. Sudden release of tension can result in injury to you.

Triumph Sickle Bar (Archive Book) 10/02

© 2002 Alamo Group Inc.

Parts Section -153

Springs are furnished, assembled into the spring support, as assemblies only. Springs only are not available as separate parts. The #1617 release tool may be ordered from the factory on an exchange return basis or purchased outright.

#### **LATCH SPRING BREAK-A-WAY:**

(3500 Model) Figure 23

The break-a-way force is adjustable on this model. To obtain the desired point of breakaway, simply tighten or loosen the long capscrew, projecting thru the spring. DO NOT OVER-TIGHTEN or bottom the spring. Excessive force will result in damage to the cutterbar support and knuckle and will bend the carriage.

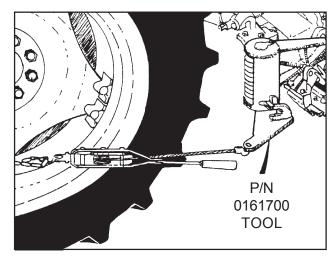

FIGURE 21

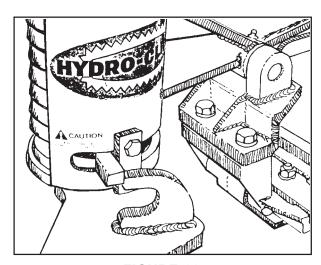

FIGURE 22

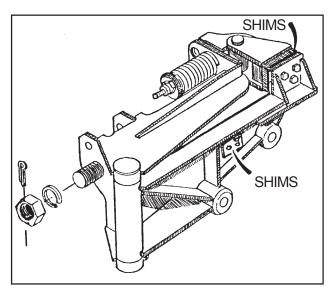

FIGURE 23

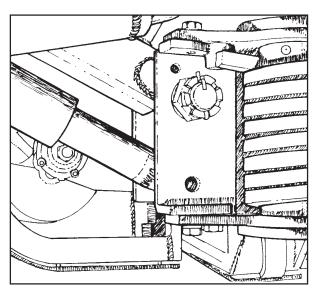

FIGURE 24

#### **MODEL 8500 PITMANLESS MOWER DRIVE:**

#### **DRIVE UNIT:**

If the drive arm is striking the drive unit housing, there are three possible causes to be checked out.

- 1. The drive arm clamping screw may be loose. It is very important that this connection be TIGHT and torqued to 150 ft. lbs. Continued operation with a loose drive arm will pound out the keyway in the drive unit crankshaft and cause the drive arm to break or cause expensive failure of the drive unit's internal parts.
- 2. The flywheel or motor shaft splines may be worn causing overtravel of the drive arm. If this is the problem, the splined flywheel sleeve and/or motor shaft should be replaced. Check this connection at least twice a year. Lubricate splines with lubriplate Mo-Lith #2 or Equivalent.
- 3. The internal bearings in the drive unit may be worn out after long service. In this case, the drive unit should be replaced or repaired. Internal parts are available for field repairs. Refer to the parts book page marked 4490 Basic Drive Unit, page #35.4, for the service parts needed to make these repairs.

#### **FLYWHEEL:**

The only service required is replacement of the splined sleeve in the flywheel. Proceed as follows:

- 1. Remove the four socket head capscrews attaching the motor to the drive unit. It is not necessary to remove the motor hoses.
- **2.** Pull the motor away from the drive unit.
- 3. Remove the four socket head capscrews from the flywheel and pull the flywheel out of the drive unit
- **4.** Remove the snap ring from the end of the splined sleeve.
- **5.** Unscrew the sleeve from the flywheel. This is a right hand thread.
- **6.** Install the new sleeve. Coat the splines with a thin film of LUBRIPLATE MO-LITH #2 or equivalent.
- 7. Reverse the procedure for reassembly. Apply a drop or two of Loctite (Non-Permanent) to the cap screw threads. Torque the flywheel screws to 30 ft. lbs. Torque the motor screws to 150 ft. lbs.

#### **HYDRAULIC SYSTEM: All Models**

**PUMP:** The pump is the heart of the hyd. circuit & is vital to the performance of all Triumph mowers. Worn pumps should be replaced or repaired. It is recommended that most customers replace the #0169900 pump. However, spare parts and seal repair kits are available for field repair if desired. **ALWAYS DRAIN, CLEAN AND REFILL THE TANK WITH CLEAN OIL** when pump repairs are made. Note Changes in Pump Types, See Pump Information in this Book for Pump Replacement & Pump Identification.

**NOTICE:** To avoid possible damage to a new or rebuilt pump, run the tractor engine at very low RPM for about 5 minutes with all control levers in neutral position. If the mower operated from the tractor's internal pump or loader pump, refer to the tractor manufacturer's service manual.

**MOTOR**; Like the pump, the motor also plays a critical part in mower performance. Motors should also be replaced or rebuilt when they become worn.

#### VALVE(s):

The major cause of valve malfunction is dirty oil or foreign material causing the valve spools to be scored or seals to fail. If repairs are required remove the valve from the system and thoroughly clean all parts before reassembly. Replacement parts and service kits are available. The valve body and spools are match fitted and are not interchangeable or adjustable. Check the valve lever linkage for free movement to allow the detents to locate without binding.

#### PRESSURE RELIEF VALVE:

The pressure relief valve for the entire hydraulic system is built into the control valve. The relief pressure is factory set at 1700 PSI. (Does not apply to mower operating from John Deere internal pumps). To adjust the relief pressure, loosen the jam nut and adjust the screw clockwise to increase pressure, counterclockwise to decrease pressure. The relief pressure can be checked in several ways:

- 1. Install a tee and a 0-3000# PSI gauge in the inlet high pressure side of the governor.
- 2. Raise the mower to the full upright and transport position holding the bar lift control in the raised position. Read the gauge.

#### OR

3. Block the knife with a heavy piece of wood between two guards. Then turn on the motor with the motor control lever. Read the gauge.

Either of these methods forces all the oil to go over the relief valve and at 1200 RPM or higher engine speed the gauge should read 1700 PSI (or 2250 PSI for John Deere system).

**ATTENTION!** Never operate the mower with incorrect relief valve settings. A low setting will cause poor performance and high oil temperatures. A high setting can result in damage to pitman, knives, hoses, etc.

### <u>NOTES</u>

# Serial Number Listings

- 1. <u>Serial Numbers use a Prefix Prior to Approx 1990 S/N did not use Prefix. Prefix added approx.</u> 1990 to determine Model (Example SB25- is 2500 Model etc.) After Mid 1991 the S/N was changed to reflect the Unit production Year, Example SB25-9216072, the first two digits after dash is the Year unit was manufactured, in this case it was 1992 (-92\_\_\_\_\_).
- 2. <u>Serial Numbers in this listing is approx.</u> from 1990 to end of production in Feb 2001, Prior S/N's are not available for listing in this Book. If Questions about earlier Serial Numbers contact Alamo Customer Service Dept.
- 3. Brackets and Components used in Mount Kits, Hydraulic Kits will be listed in the original Installation Sheet that was shipped with Unit and are not available for listing in this Book. For These components it will be required to contact Alamo Customer Service Dept. When contacting Alamo Customer Service have all Tractor and Cutter Model Information available, This information will be needed to get the correct Sheet/Sheets pertaining to Assembly of Model to Tractor Type.
